

Seminar

„FUTURE FARMING: HOW ARE CLIMATE CHALLENGES TRANSFORMING WORK AND SECTOR ATTRACTIVENESS?“

The seminar will provide a brief overview of studies on working conditions in agriculture across different countries in the context of climate change. It will also present the results of a Social Hackathon focused on analysing the impact of climate change on future working conditions and the attractiveness of farming. These results were identified within the framework of the European Horizon programme project SAFEHABITUS. The project aims to strengthen farm health and safety knowledge and innovation systems and to support the EU's transition towards socially sustainable farming. In the final session, participants will be invited to take part in a discussion on Increasing the Attractiveness of the Agriculture?
