

Seminar

„DISCOVER THE ARBORETUM: VISUALIZATION AND NATURE-BASED SOLUTIONS“

This seminar introduces the arboretum as a living space that can be explored through visualization tools and understood as a source of nature-based solutions. Participants will learn how visualizing natural elements helps to better see ecological processes, environmental challenges, and practical solutions inspired by nature. The seminar aims to raise awareness of how nature-based solutions can support healthier, more sustainable living environments and strengthen the connection between people and their surrounding landscape.
