

Seminar

BIOCIRCULAR ECONOMY: HOW PLANT-BASED BY-PRODUCTS ARE CHANGING THE FOOD SECTOR?

This seminar will explore innovative approaches to recycling plant-based by-products into valuable products in the food industry. We will discuss the use of sustainable technologies, the extraction of bioactive substances, and the development of new eco-friendly products. The session will also provide practical examples and success stories of companies that are integrating sustainability principles into their operations, reducing environmental impact and enhancing economic efficiency.
